Objective of the Visit:

The main objective of the industrial visit was to provide students with practical exposure to the working process of a sugar factory and to understand the various stages involved in sugar production — from sugarcane crushing to the final packaging of sugar.

Details of the Visit:

Students visited the different sections of the factory such as:

1. Cane Yard: Where sugarcane is unloaded and prepared for crushing.
2. Crushing Unit: Observed the machines used for extracting juice from sugarcane.
3. Boiling and Clarification Unit: Learned how impurities are removed and the juice is concentrated.
4. Crystallization and Centrifugal Section: Saw how sugar crystals are formed and separated
5. Packaging Section: Understood how sugar is dried, weighed, and packed for distribution.

The visit was guided by factory engineers and staff who explained each process in detail and answered the students' queries.

Outcome / Learning:

Gained knowledge of sugar manufacturing processes.

Understood industrial safety measures and machinery operations.

Learned about by-products like molasses and bagasse and their uses in ethanol and power generation.

Experienced the importance of teamwork and quality control in production.

Conclusion:

The industrial visit to the sugar factory was highly informative and beneficial for students. It bridged the gap between theoretical learning and practical application, providing valuable industry exposure and enhancing students' understanding of real-world industrial operations.
